

19 June 2019, 3.00 – 5.30 pm

UN Headquarters,
United Nations Plaza, New York City,
Conference Room 6

Air Pollution and Health Launch Event

Academy of Science
of South Africa

Brazilian Academy
of Sciences

German National Academy
of Sciences Leopoldina

U.S. National Academy
of Medicine

U.S. National Academy
of Sciences

Background

Air pollution is a major, preventable and manageable threat to people's health, well-being and the fulfillment of sustainable development. Air pollution is estimated to contribute to at least 5 million premature deaths each year across the world. No one remains unaffected by dirty air, but the adverse impacts of air pollution fall most heavily upon vulnerable populations, such as children, women, and people living in poverty. Clean air is as vital to life on earth as clean water.

The Academy of Science of South Africa, the Brazilian Academy of Sciences, the German National Academy of Sciences Leopoldina, the U.S. National Academy of Medicine, and the U.S. National Academy of Sciences have started an initiative on "Air Pollution and Health" relating to the UN Sustainable Development Goals. The five academies brought together leading scientists from South Africa, Brazil, Germany, and the United States as well as representatives of the UN and civil society. The first outcome of this initiative is a compact science-policy statement, which addresses global options and measures to reduce air pollution-associated risks to health. In this event, the statement will be launched and handed over in a ceremony to high-level UN diplomats from South Africa, Brazil, Germany, and the United States and to senior UN representatives.
